CATALTYIC ACTIVITY: ATP + a protein = ADP + a SUBUNIT: Binds to RP9 (By similarity).

SUBCELLULAR LOCATION: Cytoplasmic and nuclear. TISSUE SPECIFICITY: Expressed primarily in celhematopoietic and germ line lineages.

PTM: Autophosphorylated on tyrosine residues.

SIMILARITY: Belongs to the Ser/Thr protein kin

Immunopathol. 78:177-195(2001).

CATALYTIC ACTIVITY: ATP + a protein = ADP + a | SUBUNIT: Binds to RP9 (By similarity).

SUBCELLULAR LOCATION: Cytoplasmic and nuclear PTM: Autophosphorylated (By similarity).

SIMILARITY: Belongs to the Ser/Thr protein kin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein. TISSUE SPECIFICITY: Widely expressed. No expression in colon, thymus, and small intestine. Expressed in human hepatoma cell lines but not in normal liver tissues.

SIMILARITY: Belongs to the Ser/Thr protein kinase family. PIW
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         mouse cDNA sequences.";

"Generstion and initial analysis of more than 15 0.00 full-length human

"Generstion and initial analysis of more than 15 0.00 full-length human
Klein S., Gerhard D.S.;
Submitted (AUG-2004) to the EMBL/GenBank/DDBJ databases.
-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- SIMILARITY: Belongs to the Ser/Thr protein kinase family.
EMBL; BC081340; AAH81340.1; -; mRNA.
SMR; O66111; 32-297.
